5. Handling of Cells

5.1 Consideration of strength of film package

- 1) Soft Aluminium foil
 - Easily damaged by sharp edge parts such as pins and needles, Ni-tabs, comparing with metalcan-cased LIB.
- 2).Sealed edge may be damaged by heat above 100°C, bend or fold sealed edge.

5.2 Prohibition short circuit

Never make short circuit cell. It generates very high current which causes heating of the cells and may cause electrolyte leakage, gassing or explosion that are very dangerous.

The Power-Xtra tabs may be easily short-circuited by putting them on conductive surface. Such outer short circuit may lead to heat generation and damage of the cell. An appropriate circuitry with PCM shall be employed to protect accidental short circuit of the battery pack.

5.3. Mechanical shock

Power-Xtra cells have less mechanical endurance than metal-can-cased LIB. Falling, hitting, bending, etc. may cause degradation of Power-Xtra characteristics.

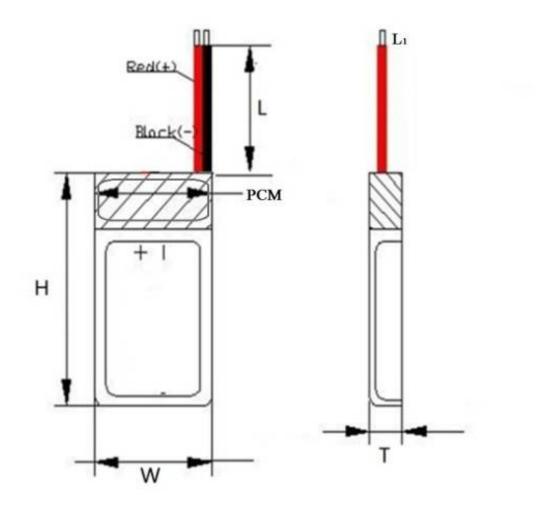

5.4 Handling of tabsThe battery tabs are not so stubborn especially for aluminum tab.Don't bend tab.Do not bend tabs unnecessarily.

6. Storing the Batteries

The batteries should be stored at room temperature, charged to about 30% to 50% of capacity. We recommend that batteries be charged about once per half a year to prevent over discharge.
